

6th Call for proposals for Transnational Access

Call deadline – 12th July 2017

Background and objectives

The AQUAEXCEL²⁰²⁰ project unites major aquaculture experimental facilities with capacity to undertake experimental trials on a selection of commercially important fish aquaculture species and system types. These facilities are made available to the research community for Transnational Access (TNA) with the support of the European Union's Horizon 2020 Framework Programme for Research and Technological Development (Infrastructures).

Transnational Access involves a research group in one country collaborating with one or more AQUAEXCEL²⁰²⁰ Infrastructures that are located in a different country to the applicant, and which offer facilities and expertise not available in their own country. The collaboration normally takes the form of one or more scientists from the applicant organisation visiting the selected AQUAEXCEL²⁰²⁰ installation to undertake research work there for up to 3 months. In some cases, remote access is also available (where the applicant is not present for some or all of the experimental period at the installation).

The facilities available cover the entire range of aquaculture production systems (recirculation, flow-through, cage, hatchery and pond systems); environments (freshwater and marine, cold, temperate and warm water); scales (small, medium and industrial scale); fish species (salmon, trout, sea bass, sea bream, cod, carp etc.); and fields of expertise (nutrition, physiology, health and welfare, genetics, engineering, monitoring and management technologies).

The overall objective of the project is to promote the coordinated use and development of these experimental facilities and encourage problem-based research and knowledge transfer to more effectively support the development of a sustainable European production of high quality seafood with reduced environmental impact. The establishment of new transnational collaborations is strongly encouraged, as well as the participation by SMEs.

Proposal requirements

Expected projects can involve research on any of the available aquatic species at the selected research infrastructure. The participating facilities are summarised below and full details are available in the AQUAEXCEL²⁰²⁰ TNA Guide document, via the project website (<http://www.aquaexcel2020.eu/>) or through direct contact with the selected research infrastructure. Proposals can only be approved if feasible and visits do not exceed a total duration of 3 months (Where necessary, experimental work can exceed this period, but not visits).

Priority will be given to proposals submitted by a single researcher or by research groups where the group leader and a majority of group members are affiliated to institutions or laboratories (public or private) from European member or Associated States¹, which are different from the State where the selected Research Infrastructure is located. A maximum of 20% of TNA projects may involve applicants from third countries (i.e. outside the EU or Associated States).

¹ Associated states: Switzerland, Norway, Iceland and Liechtenstein, Israel, Turkey, Croatia, the Former Yugoslav Republic of Macedonia and Serbia, Albania and Montenegro, Bosnia & Herzegovina

It is required that the facility users communicate the results acquired in an AQUAEXCEL²⁰²⁰ Research Infrastructure to the scientific community at large through classical means, i.e. project reports, congress communications and scientific publications². All group leaders are required to submit their metadata sets and summary report to the Research Infrastructure provider, for further publication via the project dissemination channels (technical leaflets, website pages and newsletters). Research proposals should also include plans for exploitation of results wherever possible.

Proposal review

Each submitted proposal that is eligible, and considered to be feasible at the chosen Research Infrastructure, will be appraised by at least two aquaculture experts (including one who is external to the AQUAEXCEL²⁰²⁰ project) and then by a selection panel appointed by the Executive Committee, which also includes external experts.

Following an initial screening for practical and financial feasibility, the criteria for selection will be scientific quality, degree of innovation, relevance, exploitation potential and ethical soundness of the study. Secondary selection criteria will be the expertise of the applicants, the cost efficiency of the work, and whether group members are first time users of the facility. In considering the exploitation potential, attention will be given to how the work contributes to meeting the objectives of the European Aquaculture Technology and Innovation Platform, as defined in the thematic Strategic Research and Innovation Agenda (“The Vision”) (www.eatip.eu).

Projects approved for access will enter a negotiation phase in which the project design and costs will be agreed and the project may be subjected to further ethical review and advice. All work must be completed by 30-09-2020 to fall within the funding period of the AQUAEXCEL²⁰²⁰ project by the European Commission. Applications that are not approved will receive feedback and may be re-submitted at a subsequent call.

Resources

There are 39 research installations provided by 19 partner organisations available for access within the AQUAEXCEL²⁰²⁰ project. Access is measured in the most appropriate way for each installation. Not all of the installations or all of the units of access at an installation will be available in each call. Applicants must indicate the number of units of access they wish to apply for. A summary of the research installations arranged by major facilities is shown below. More detailed information on each facility is provided in the AQUAEXCEL²⁰²⁰ TNA Guide (Separate PDF document downloadable from the AQUAEXCEL²⁰²⁰ website). Web links to the individual organisations pages are also provided. The table below includes an indication of the availability of each installation in terms of how many projects (approximately) can be funded within this call. However, please contact the appropriate Infrastructure Manager for further details and to discuss your requirements.

The AQUAEXCEL²⁰²⁰ project will cover both facility costs and the research group(s) travel and subsistence expenses for work included in the submitted application and approved by the Selection Panel. Most facilities assume one person per project whilst some assume that up to two will be involved. As costs and reimbursement arrangements may vary between facilities, full details will be provided on request to the specific Research Infrastructure. Host organisations are obliged to use their standard rules for reimbursing travel and subsistence expenses although where flat rates are used they will be subject to maximum allowances set out in EC H2020 funding regulations. Experimental work requiring additional consumables, transport of equipment or samples, the use of analytical

² Exceptions may be made for Small to Medium Sized Enterprises (SMEs) that expect to directly exploit the results

facilities, or additional training that is not included in the facility costs may need to be funded by the applicant organisation.

Orientation Committee

If you require further advice concerning which infrastructures might best meet your needs and provide the facilities needed for your experimental work, please contact the Orientation Committee via aquaexcel-OC@inra.fr. The Orientation Committee comprises a small group of scientific experts familiar with the research infrastructures and management of TNA projects. This service is particularly intended for SMEs and organisations who have not previously engaged with AQUAEXCEL²⁰²⁰.

Application procedure

Information on the facilities offering Transnational access is available at the project website (<http://www.aquaexcel2020.eu/>) and in the document “AQUAEXCEL²⁰²⁰ Guide for Transnational Access” which is available on the website. Applicants are required to contact their preferred partner facility to discuss the project design and costs for the proposed project, before the submission of an application.

Applications must be prepared and submitted via the TNA online application system at <http://160.217.215.252/aquaexcel/>. Each person involved in the application must first create an individual username to access the system. Further guidance on using the system is provided at that web site. Submissions must be made on or before the announced Call deadline – **12th July 2017**.

Engagement conditions

1. All TNA projects will be subject to the Research Access and Research Data Management Policies of the host Infrastructure and as guided by the EU Charter for Access to Research Infrastructures (https://ec.europa.eu/research/infrastructures/index_en.cfm?pg=access_ri)
2. Only user groups that are allowed to disseminate the results they have generated under the action may benefit from the access, unless the users are working for SMEs.
3. **All group members³** are expected to publish the results of their work at the infrastructure in the open literature. All publications resulting from the project should acknowledge the EC-support by mentioning: “The access to [name of selected facility] was funded by the European Union’s Horizon 2020 Programme (INFRAIA-1-2014-2015) under grant agreement n° 652831.”
4. After the completion of an AQUAEXCEL²⁰²⁰ Transnational Access, each appointed group leader should: Submit feedback reports as requested by the TNA Manager or other AQUAEXCEL²⁰²⁰ Office holders, or as required by the European Commission.
5. Travel and subsistence expenses linked to the access will be reimbursed upon approval of the report. Reimbursements will be done according to administrative rules of each hosting organisation.
6. Funding is subject to EC rules and regulations e.g. as set out in the Model Agreement - http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/amga/h2020-amga_en.pdf

Further information: If further guidance on the call and application procedure is required please contact John Bostock <j.c.bostock@stir.ac.uk>

Disclaimer: *This project is part-funded from the European Union’s Horizon 2020 Programme (INFRAIA-1-2014-2015) under grant agreement no 652831. This document has been authored by consortium members, and the European Union cannot be held responsible for any use which may be made of the information contained therein.*

³ With some exemptions for SMEs

Summary of Research Infrastructure Facilities

Note: Installations are listed by major facilities or services and may appear in several sections; in which case the units of access and number of projects listed are not cumulative. Contact the Installation Manager for further details.
